# Entrega continua

Andrés Jiménez

Branches

- Por cada tarea crear un branch
  - **formato**: ID-TAREA/Descripción
  - **ejemplo**: CI-3/ErrorReportes
- Usar ci-test.hatit.co para verificar que el desarrollo es compatible.
  - crear un **Pull Request** para hacer merge en branch **testing**.
- El branch testing no debe tener otros commits.
- El branch testing debe estar actualizado desde master.
- El PR solo se podrá mezclar si jenkins confirma que no hay problemas con el branch asociado al nuevo PR.

url de PR, el id es 25.

Deploy

- Deploy se hace por medio de webhook de Github.
- Está configurado para los branches **testing** y **master**.
  - **testing**: despliega en ci-test.hatit.co. Permite probar desarollo.
  - **master**: despliega en ci.hatit.co. Entrega un nuevo desarrollo listo para usar.
- Agente en background que recibe request desde Github.
  - **log**: /var/log/github/webhook.log
  - Detiene wildfly
  - Actualiza branch (git pull)
  - Construye binario (mvn)
  - Despliega binario en wildfly
  - Inicia wildfly.

```

HATIT Enterprise para Central Inmobiliaria de Colombia

Entrega de desarrollo

- Luego de verificar desarrollo, crear un PR para mezclar en master.
- Github verificará:
  - Existe una revisión y aprobación del PR por "un par".
  - Resultados de ejecución de jenkins job.
- Una vez mezclado en master, quedará el desarrollo listo para ser usado.
- Si el desarrollo no altera estado del sistema en prod, verificar directamente.
- En caso contrario notificar al cliente del nuevo desarrollo.
